# Overview of offtake contracts

- Offtake contracts provide “royalty-like” exposure
- Returns driven by gold price, volatility, production profile and exploration success
- Offtake profitability increases with volatility and a rising gold price environment
- Trident has the right to acquire gold at the minimum gold price in a quotation period (6 – 8 days)
- Trident profits from difference between selected purchase price and onward sale price
- Longer Quotation Period contracts have superior returns
- Weighted average calculated margin over last 10-years of 1.33% NSR<sup>2</sup> equivalent
- Profitability increases with gold price movements, higher production profile and exploration success
- Gold deliveries continue to ramp-up across the portfolio as assets execute on expansions and/or production ramp-ups

## Historical Calculated Offtake Margins (NSR Equivalents)<sup>1</sup>

1. Actual average NSR margin calculated as realized margin per month divided by average gold price during that month

2. NSR equivalent calculated by calculating the difference between the closing daily spot gold price and the minimum closing gold price across the QP period and dividing the margin by the daily spot gold price over the last 10 years
